Analysis of Agricultural Feeds and Pet Foods 1998

BY MARY JANE INCORVIA MATTINA

*Bulletin 956
May 1999*

During the period January 1, 1998 to December 31, 1998 the Department of Analytical Chemistry at The Connecticut Agricultural Experiment Station analyzed 154 feed samples. Nine different manufacturers were represented in this group of samples, which included products for commercial agricultural operations as well as pet foods. The samples were collected by Alton VanDyke and John Schneider of the Connecticut Department of Agriculture. The analyses were performed by Craig Musante and Mamie Pyles under the supervision of Dr. David Stilwell.

The products were analyzed to determine that the label guarantees are in compliance with State of Connecticut regulations. A product is found to be "unsatisfactory" if the found value of a parameter differs from the label guarantee using the percent analytical variation guidelines recommended by the Association of the American Feed Control Officials. In the Tables are listed the label guarantee for the macronutrients in the product, the results of the proximate analysis for each sample, and results of the analyses for micronutrients. The chemical symbols for the micronutrients are as follows: calcium, Ca; phosphorus, P; magnesium, Mg; potassium, K; copper, Cu; zinc, Zn; selenium, Se; sodium, Na. Values are given in percent unless otherwise noted. A deficiency in a guaranteed ingredient is indicated by a minus (-) sign next to the found parameter. An excess of a substance is indicated by a plus (+) sign next to the found value. Of the 154 samples analyzed, 31 samples were found to be deficient in one or more macronutrients (20.1%) and 37 samples were unsatisfactory in one or more micronutrients (18.8%).

The Connecticut Agricultural Experiment Station is an Equal Opportunity, Affirmative Action Employer. Persons with disabilities who require alternate means of communication of program information should contact the Station Editor at (203) 974-8446 (voice); (203) 974-8502 (FAX); or paul.gough@po.state.ct.us (E-mail)

The Connecticut Agricultural Experiment Station,
founded in 1875, is the first experiment station in America. It is chartered
by the General Assembly to make scientific inquiries and experiments
regarding plants and their pests, insects, soil and water, and to perform analyses for State
agencies. The laboratories of the Station are in New Haven and Windsor; its Lockwood
Farm is in Hamden. Single copies of bulletins are available free upon request to Pub-
lications; Box 1106; New Haven, Connecticut 06504. ISSN 0097-0905
